

FORM 2
THE PATENT ACT 1970
(39 OF 1970)
&
THE PATENT RULES, 2003
PROVISIONAL/COMPLETE SPECIFICATION
(SEE SECTION 10 AND RULE 13)

1. TITLE OF INVENTION: MULTI-PURPOSE STAIRCASE LIFT

2. APPLICANTS: (1)

a) NAME: GUDURU VENKATA MARUTHI ABHIRAM

b) NATIONALITY: INDIAN

c) ADDRESS: 29-28-2A, DASARIVARI STREET, SURYARAOPET, VIJAYAWADA, 520002.

(2)a) NAME: MANGALAGIRI BALAJI

b) NATIONALITY: INDIAN

c) ADDRESS: VR SIDDHARTHA ENGINEERING COLLEGE, KANURU, VIJAYAWADA, 520007.

(3)a) NAME: RAJULAPATI NAVEEN

b) NATIONALITY: INDIAN

c) ADDRESS: SIVA PARVATI NAGAR FIRST LINE, VIJAYAWADA, 520007.

(4)a) NAME: MOHAMMAD ABDUL HADDEE IRSHAD

b) NATIONALITY: INDIAN

c) ADDRESS: R.T.C. COLONY, 4TH CROSS, RADAR ROAD, MACHILIPATNAM, 521002.

3. PREAMBLE TO DESCRIPTION:

COMPLETE SPECIFICATIONS: The life-changing effects that staircase lifts have on those with restricted mobility before getting into the specifics of these devices. Lifts for stairs, also referred to as chairlifts or stairlifts, offer a way for individuals to travel freely and easily between levels of their houses and transport heavy weights with ease. In addition to this people need not teleport from wheelchair to staircase lift as it has a special and unique design which holds the wheelchair itself. Improving mobility and quality of life, whether you are a caregiver, a person with decreased mobility, or someone interested in accessibility solutions.

4.DESRIPTION:(COMPLETE)

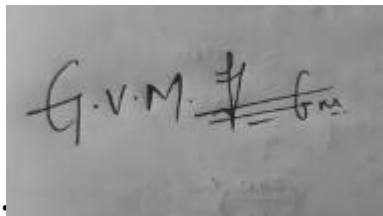

- This innovative device is utilized to move people and weights upward without the need for an elevator and without changing the architectural design.
- A staircase lift is a mechanical device for lifting people and wheelchairs up and down on the stairs, who may find difficulty in doing so themselves.
- For sufficiently wide stairs, a rail is mounted to the treads of the stairs. A chair or lifting platform is attached to the rail. A person on the chair or platform is lifted as the chair or platform moves along the rail, old age and goods are to be carried across the staircase.
- Advantages over the conventional hydraulic lift are no civil structure and alteration is required, low cost, less bulkiness, less power, less maintenance requires. Easy design, easy installations can be of industrial use too
- This design includes a gripping bar that allows wheelchair users to grab onto the staircase lift, eliminating the need for them to teleport from their wheelchair to the staircase lift.
- The staircase lift is mounted along the staircase rail, which moves along the railing to utilize available space. The staircase lift features a collapsible base that facilitates portability.

6.ABSTRACT

The present work investigates the design and analysis of a staircase lift, which can be used as a Material Handling System. A staircase lift is a mechanical device for lifting people and wheelchairs up and down on the stairs, who may find difficulty in doing so themselves. For sufficiently wide stairs, a rail is mounted to the treads of the stairs. A chair or lifting platform is attached to the rail. A person on the chair or platform is lifted as the chair or platform moves along the rail, old age and goods are to be carried across the staircase. A staircase lift is a type of lift that can be mounted on the staircase without altering civil structure. This lift runs on electric power and consists of a motor, reduction gear box, rope drive, two rails and a sliding chair. In this system we use DC motor for changing the polarity of the power supply which will make the motor run in reverse direction. Advantages over the conventional hydraulic lift are no civil structure and alteration is required, low cost, less bulkiness, less power, less maintenance requires. Easy design, easy installations can be of industrial use too. Moreover, considering some drawbacks due to weight carrying capacity completely depend upon the capacity of motor. There is lot of scope for further modification in the project as using monorail instead of two, use of belt drive or chain drive instead of rope drive, Incorporation and automation/ timer unit which will ease the use of device. Rack and carrier arrangement for using the device for curved staircase and use of work & roller reduction gear assembly.

Key words: Platform, Rails, Wire rope drive, AC motor, civil structure.

7.DATE AND SIGNATURE: 07/11/2023

SIGNATURE:

NAME: GUDURU VENKATA MARUTHI ABHIRAM

A handwritten signature in black ink, appearing to read 'M. Balaji', with a long horizontal stroke extending to the right.

SIGNATURE:

NAME: MANGALAGIRI BALAJI

A handwritten signature in blue ink, appearing to read 'R. Naveen', with a long horizontal stroke extending to the right.

SIGNATURE:

NAME: RAJULAPATI NAVEEN

A handwritten signature in black ink, appearing to read 'M. A. H. Irshad', with a long horizontal stroke extending to the right.
